

DVB-T Dongle

DVB-T

Turn your Pi into a digital TV or radio with this USB DVB-T dongle!

The Fitipower FC0012 tuner can receive signals in the 22 - 948.6 MHz range, and the kit includes a small antenna and remote control. It's ideal for receiving free-to-air digital TV channels, digital DAB radio, or FM radio.

Note that these newer versions of the DVB-T dongle (with the FC0012 rather than the R820T tuner) can no longer be used for plane tracking due to their narrower frequency range.
